## CWH-3010

### ICU Ventilator

## Multi-function ICU ventilator suitable for various environments

A ventilator is a medical device used to assist or replace natural breathing, widely used in emergency care, intensive care units, and home care. By adjusting the pressure and flow of gases, the ventilator provides stable respiratory support, ensuring oxygen delivery and improving breathing function. It is especially beneficial for patients suffering from respiratory failure or respiratory system diseases.

### Main Functions And Features

- Invasive and non-invasive two ventilation modes.
- Pressure and flow rate trigger functions.
- Advanced automatic tidal volume compensation system.
- Automatic lung compliance compensation function.
- Synchronous atomization and humidification .
- function LED Three-color alarm light level indication.

### Convenient To Operate, Clinically-oriented Ventilator

- 12.1- inch HD color TFT LCD touch screen.
- Intelligent control system, intuitive English operating Interface, convenient to operate.
- Applied for Adult and Pediatric.
- Day/night mode, adjustable screen brightness to suit different working environments.
- Three types of waveform and loop can be displayed on the same screen.

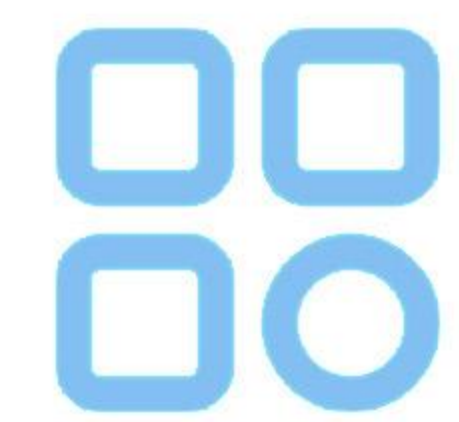

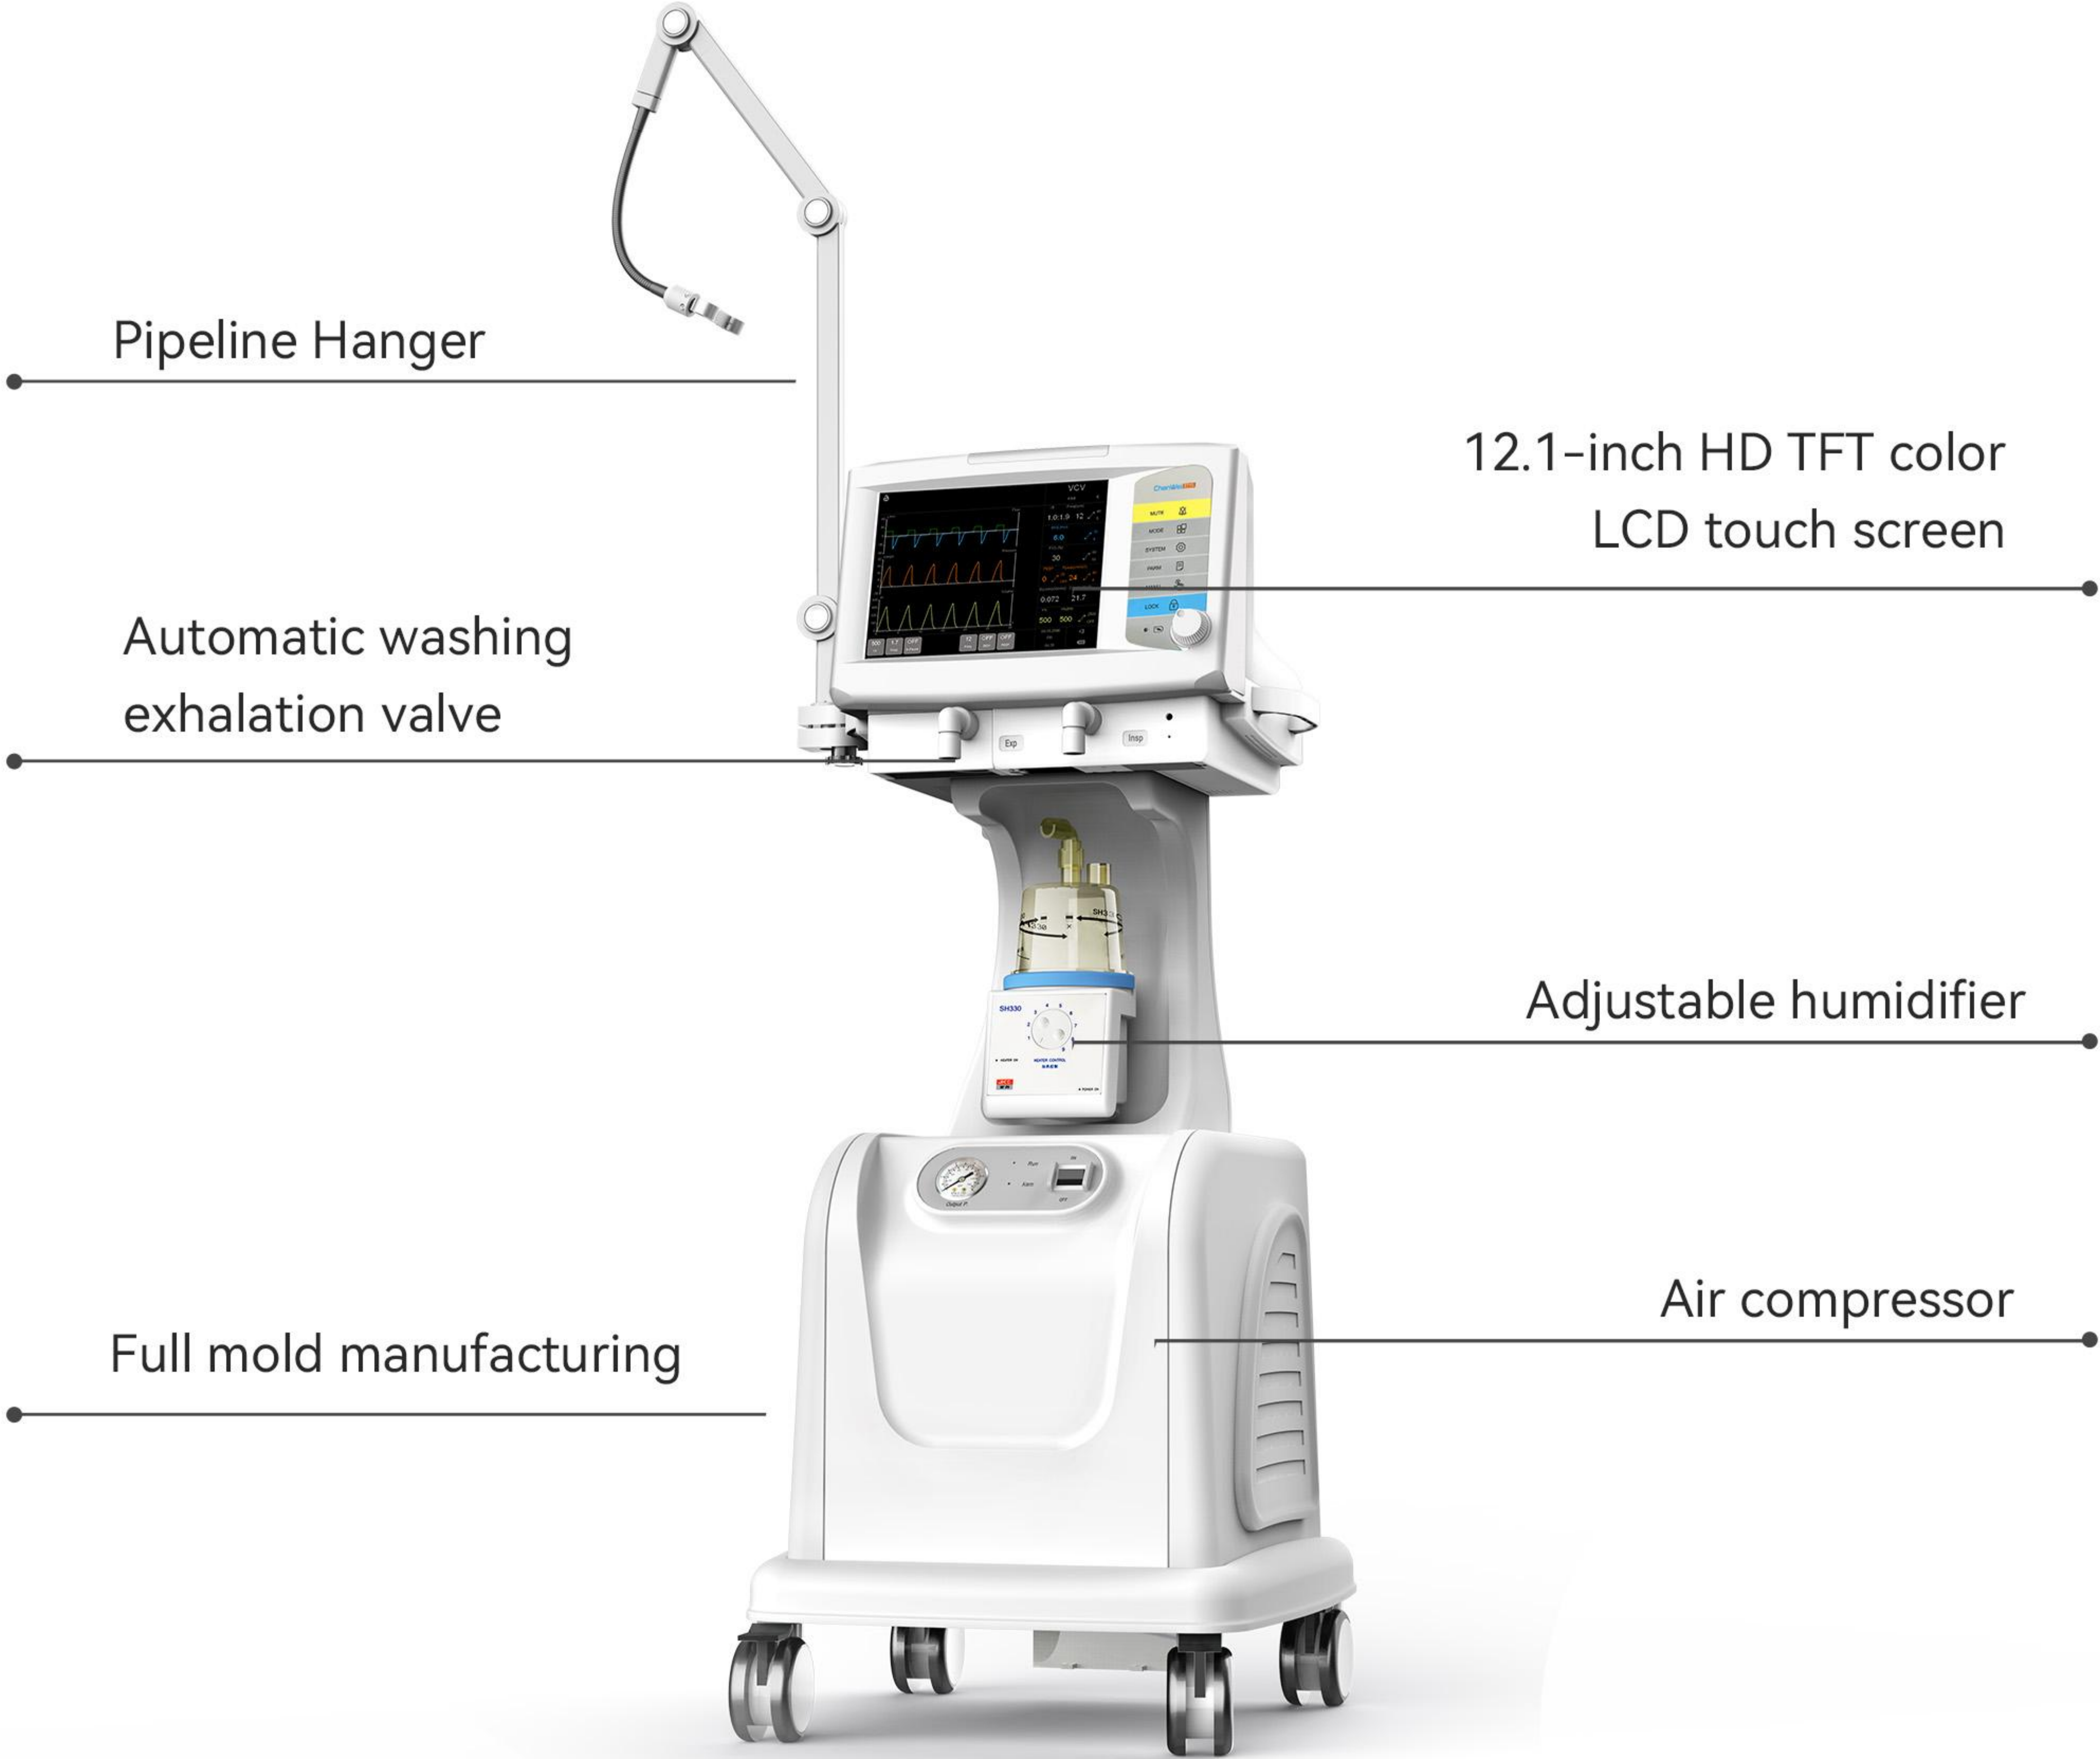

# Multi-function ICU ventilator suitable for various environments

## Safe, Stable And Reliable Ventilator

- The ventilator has obtained EU CE certification.
- Pneumatic-electronic control mode to control or assist ventilation and monitor and display the patient's ventilation parameters.
- Full-mold production, sturdy structure, easy to clean and disinfect.
- Core components use well-known imported brands, ensuring safer and more stable operation.
- Backup DC battery, main unit working time more than 120 minutes.
- Applied for adults, pediatric and infants, meeting the needs of patients of different age groups.
- Comprehensive ventilation mode, powerful monitoring and alarm functions.

## Fully-functional And Easy-to-use Ventilator

Stable tidal volume control system, pressure and flow trigger functions. Various ventilation modes meet the needs of different patients as well as high-level ventilation requirements: volume-controlled ventilation, pressure-controlled ventilation, pressure support ventilation, assist/control ventilation, continuous positive airway pressure, apnea ventilation, oxygen remedy, and more.

- Optional end-tidal carbon dioxide (CO<sub>2</sub>) monitoring function.
- Optional intelligent suction function.
- Optional high flow oxygen remedy function.

## Accurate And Safe Control System

Accurate, flexible and comfortable ventilation performance, the perfect combination of volume and pressure modes, coupled with innovative functions and multiple breathing modes, can provide a variety of respiratory treatment solutions for children to adult patients.
